Bringing the Spa to You

Galvanic Spa™ II

NU SKIN®
Rejuvenate your complexion, revitalize your scalp, and refine your body.

- Introducing Nu Skin Galvanic Spa™ II system:
- Programmable device with patented self-adjusting Galvanic currents and interchangeable heads for the face, scalp and body.
- Works synergistically with specially formulated products to facilitate transport of key ingredients delivering revitalizing, restorative and rejuvenating benefits.
The history of Galvanic Current

- The "Galvanic Current," used today for cosmetic purposes to facilitate delivery of beneficial ingredients to the skin, is named after the Italian scientist.

- In 1791, Luigi Galvani was first to use electric currents for health benefits.
What is a Galvanic Treatment?

- For more than 50 years, spa and salon professionals have used gentle galvanic currents in customized treatments to refresh and energize the skin. These treatments, through a gentle massaging action, help to focus cellular energy and enhance circulation.
Key benefits

- It is Affordable
- Compared to traditional Galvanic treatments at Spa Centers, the Nu Skin Galvanic Spa System™ II is a cost-effective investment, which delivers wonderful, re-energizing results.
Key benefits

- It is **Convenient**
- User-selectable polarity: increases the number of products for use with Galvanic
- Flexible program timing: accommodates a wider range of applications: scalp, face, body
- Replaceable batteries: eliminates cords, adapters and dependence on electrical outlets
Pre-treat Gel

- Use the pre-treat gel with the Galvanic Spa II Face Conductor to help remove skin impurities and let your pores ‘breathe’.
- It contains extracts of marigold extract, sea kelp and vanilla for their soothing effects.
- TEA Cocoyl Glutamate purifies the skin.
Galvanic Action: Pre-Treatment

- During the Pre-Treat Cycle, the Galvanic Spa instrument is negatively charged and the pre-treat gel is negatively charged.
- These negative charges repel each other driving the Pre-Treat Gel into the skin.
- The Pre-Treat Gel binds to impurities in the skin.
Use the treatment gel with the Galvanic Spa II Face Conductor to revive and invigorate your skin.

Contains Arginine, an amino acid which helps the skin to recover from stress.

Magnesium is a necessary component that promotes cellular energy.
Galvanic Action: Treatment

- During the Treatment cycle, the Galvanic Instrument and the Treatment Gel are positively charged.
- These positive charges repel each other, helping to deliver the beneficial ingredients to the skin.
- The positively charged instrument attracts the negatively charged impurities drawing them out of the skin.
Nu Skin® Galvanic Spa™ II System for the body

- **Shape Up!**
- Body Shaping Gel works exclusively with the Galvanic Spa™ II instrument to minimize and smooth the appearance of cellulite.
- This exclusive formula, along with the massaging action of the Galvanic Spa™ II Instrument and Body Conductor, help to target pockets of fat and toxins for a firmer appearance.
Body Shaping Gel

- Theobromine (Theobroma cacao extract): Rich in a molecule shown to have an effect on a certain enzyme in fat cells, helps in fat breakdown.

- Golden Chamomile (Chrysanthellum indicum extract): This extract is rich in flavonoids, a class of antioxidants. Testing indicates these flavonoids may help inhibit the storage of fat.

The Market Trend of Spa Treatments
from the The International Spa Association (ISPA) 2002 Spa Industry Study

- “Many people no longer see the spa as "pampering", but as a requisite to stay healthy and look good.”
- “Despite the economic downturn, the Spa industry has continued to grow at a robust pace. With revenues recording an average annual growth rate over the past two years of 46 percent, the spa industry has shown the ability to weather the challenges of a weak economy.”
- “Half (51 percent) of the spa industry’s revenues ($10.7 billion in 2001) are derived from treatment rooms. Treatment room services include facials, herbal mud wraps, seaweed wraps, galvanic treatments, etc.”
Continuing Benefits

At time zero, the galvanic treatment has been concluded. The lower chamber of the Franz unit is sampled at time zero, 6 hours and 24 hours. During this time duration, no current is applied.

You can see in this slide that at 6 hours after galvanic treatment, Active “A” is entering the galvanic-treated skin (Galvanic Treatment) more than skin that has not had a galvanic treatment (No Treatment).

The control “No Treatment” (blue bar) is skin that has not had galvanic treatment.

At 24 hours there is some Active “A” entering the control skin (blue bar). However, skin that has had galvanic treatment allows much more Active “A” to enter the skin (red bar).
